MEDIA ASSET MANAGEMENT ●●○

BESTSELLER

SILVERSTACK LAB
MEDIA ASSET MANAGEMENT AND
DAILIES ON SET.

- ✓ High-speed transcoding
- ✓ Automatic audio sync/ look matching
- ✓ Direct dailies upload

Silverstack | Silverstack ^{XT}

Silverstack is the industry-leading software for on-set data management in all kinds of professional film productions. A broad set of features including copying, playback, and reporting enables the user to backup, preview, and prepare movie data right on the film set.

Silverstack copies and backs up data in a highly secure way, using established checksum methods. With Silverstack's cascading copy function, it is even possible to back up footage to the fastest medium first, before a second copy process is automatically started to the remaining drives - all while the same level of safety is retained. All offloaded and ingested data is automatically stored and structured in Silverstack's central clip library. This makes it easy to find, trace and transfer all required clip, audio, and look information.

Silverstack ^{LAB}

Silverstack Lab enables simultaneous handling of data management and dailies creation in one tool. Footage can be backed up securely and organized transparently, while dailies can be created at the same time.

The core of Silverstack Lab is its central clip library. This is where all clip, look, and audio-related information is stored after it is offloaded from the camera. When transcoded clips are created, the library also tracks and logs all essential clip information. Having all digital assets in one place makes it easier and faster to manage, control and exchange production-critical data.

Silverstack Lab comes with a high-performance transcoding engine and an automated audio sync function that significantly accelerates the creation of dailies. By supporting the simultaneous transcoding to AVID DNxHD, ProRes, and H.264 file formats (and in various resolutions), dailies creation reaches a whole new level of productivity

CLOUD-POWERED ASSET MANAGEMENT

ShotHub

POMFORT SHOTHUB
EXTEND YOUR WORKFLOW TO THE CLOUD.

- ✓ Remote data access
- ✓ Information exchange via ShotID
- ✓ Team management features

Pomfort ShotHub automatically collects, connects, and shares all relevant information about camera footage and on-set looks from both desktop applications Silverstack and Livegrade. Thus, all clip metadata and look information is remotely available, which creates the ideal framework for effective and seamless production processes.
